New Digital Cameras for Amateur Astro-Photographers

Not sure if this is you? **If you've ever sat outside in the dark with your camera and tripod trying to capture stars and planets**, you, my friend, could be an amateur astro-photographer. You would be more convincing at it if you treated yourself to a special camera...

[The Imaging Source](#) just announced an offering of **affordable, low noise astronomy cameras** that will help you capture quality images of the night sky. Made of premium aluminum and zinc materials, you can choose USB or FireWire connectivity. **You can mount them to telescopes for amazing images.** Prices start at **\$350.00** -- go to [Astronomy Cameras](#) for more information and ordering options.
